

Studio Designer

AI ACCEPTABLE USE POLICY

1. Purpose

Studio Designer recognizes the potential benefits of generative AI (GenAI) technologies, including increased efficiency, support for creative workflows, and enhanced decision-making. However, these tools come with risks relating to privacy, security, intellectual property, and misinformation. This policy defines acceptable use of publicly available GenAI tools to protect Studio Designer's data, clients, brand, and values.

2. Scope

This policy applies to all employees, contractors, and partners who use third-party, publicly available GenAI tools such as ChatGPT, Google Bard, Microsoft Copilot, DALL-E, Midjourney, etc., in connection with their work at Studio Designer. It excludes AI tools formally approved and provisioned by Studio Designer IT.

3. Acceptable Use Guidelines

Permissible Actions:

- GenAI tools may be used for idea generation, drafting preliminary content, and enhancing workflows, provided all outputs are subject to human oversight and validation.
- Users must exercise sound professional judgment and ensure that all AI-generated content is fact-checked for accuracy, reviewed for bias, and evaluated for relevance and appropriateness.
- Users must disclose any material in reliance on GenAI-generated content in deliverables or communications presented internally or externally.

- All interactions with GenAI tools should be treated as non-confidential; users should assume that submitted information could be retained, repurposed, or exposed beyond intended recipients.

Prohibited Actions:

- Users shall not enter, transmit, or expose any confidential, proprietary, or sensitive Studio Designer information—including but not limited to credentials, internal strategies, design assets, financial data, and client records—into any GenAI tool.
- Personal data about any individual, including names, contact details, likenesses, or employment information, must not be input into GenAI platforms.
- GenAI tools shall not be used for decision-making in human resources processes, including but not limited to recruitment, performance evaluation, promotion, or termination.
- No GenAI-generated content shall be represented as wholly original work without proper attribution or verification.
- Integration of any GenAI tool into Studio Designer's systems, software, or data environments requires prior written approval from the IT Department.
- Only GenAI tools approved by Studio Designer's IT Department may be used. Use of unverified or unauthorized platforms is strictly prohibited.

4. Disclaimer

This policy does not intend to infringe upon or restrict any rights protected under applicable employment laws, including but not limited to discussions related to wages, hours, or working

conditions. Studio Designer reserves the right to amend this policy as technological and regulatory developments evolve.

For questions regarding this policy or the appropriate use of AI tools, please contact the Legal or IT Department.
